

INVESTOR BRIEFING • 2026

Everfold Labs

Software products that compound.

An AI-native product studio: **12 complete products** built end to end, **9 live deployments**, a clinical co-founder, and a US go-to-market lead — run at a fraction of conventional startup cost.

Building software just got *100×* *cheaper*. Judgment didn't.

-
- A AI-native development collapsed build cost: what took a funded team a quarter now takes **one senior builder days**.
 - B The scarce assets are now **taste, domain judgment and distribution** — not headcount.
 - C The rational response: run a **portfolio**. Many cheap, complete, sellable products beat one expensive bet.
-

One build engine. Many products. Three ways each one pays.

BUILD

Ship complete

Idea → architecture → code → tests → deploy → marketing kit. Every product leaves the studio sellable, documented and handover-ready.

VALIDATE

Prove it live

Public deployments, real pilots and waitlists before a rupee of marketing spend. Kill fast, keep what compounds.

MONETIZE

Three revenue doors

Subscriptions · white-label & reseller licenses · outright asset sale. Each product is an option with multiple exits.

Everfold — because each product folds value over the last: shared engine, shared playbooks, compounding distribution.

Twelve products, built end to end.

HEALTHTECH

Sneh TherapyOS

Therapy practice OS + AI companion

Live pilot

AI · B2B

SiteBot

White-label site support agent

Local-first AI meeting notes

Sneh TherapyOS — *a clinical moat.*

-
- 01 **The whole practice in one system:** client app (Android + PWA), therapist studio, AI companion with crisis guardrails, journaling, wellness signals.
 - 02 **Live pilot with real clients,** run by co-founder Snehal Saraf — a practicing psychotherapist who designs every clinical flow. Pure-tech competitors can't copy this.
 - 03 **B2B built in:** employer/EAP module with anonymized wellbeing dashboards, insurance superbills, org join codes — the enterprise revenue path exists in the product today.
 - 04 **Unit economics engineered:** tiered AI quotas hold AI cost under 2% of subscription revenue. English · Hindi · Arabic.
-

SiteBot — white-label AI agents, sold through agencies.

-
- 01 **Any business website becomes a 24/7 support agent** — point it at a site, it learns every page; live demo deployed.
 - 02 **TeamBrain mode** turns internal documents into a private staff assistant — same engine, B2B price point.
 - 03 **Channel model:** productized packages plus an agency reseller license — agencies deploy under their own brand, we supply the engine and runbooks.
-

The SMB suite — three doors into the same customer.

FREELANCER OS

Run the business

Invoices, CRM, proposals, contracts, time — plus a bring-your-own-key AI layer. Snapline bundled with every plan.

SMB OS

Get paid locally

Invoicing that speaks each market's tax language: GST/UPI, M-Pesa, 1099/Stripe — six languages, offline-first with sync.

CHATCOMMERCE OS

Sell where chat happens

WhatsApp-native storefronts with UPI checkout and cart recovery for D2C brands, Hindi + English.

Independent professionals and small businesses — India, Africa, USA — one studio playbook, cross-sold.

Everything here *actually runs*.

LIVE DEPLOYMENTS

1

CLINICAL PILOT, REAL CLIENTS

300+

AUTOMATED TESTS GREEN

-
- + Every product ships with its own **marketing kit**: landing site, demo film, sales deck, launch plan.
-
- + Codebases are **documented and handover-ready** — each one is a sellable asset, not just a running app.
-

Four revenue streams, one cost base.

RECURRING

Subscriptions

SaaS tiers across Sneh, FreelancerOS, SMB OS, ChatCommerce OS.

CHANNEL

White-label licenses

Agencies and orgs deploy SiteBot & co. under their own brand.

SERVICES

Productized deploys

Fixed-price pilots and deployments that convert to recurring plans.

EXITS

Asset sales

Clean, tested codebases with traction — acquirable individually.

The studio's cost base is nearly flat as products are added — that's the fold.

Velocity is the moat.

-
- 01 **Days, not quarters:** a proven AI-native pipeline takes an idea to a deployed, tested, marketed product in days.

 - 02 **Full-stack ownership:** web, Android, AI backends, payments, i18n — no dependency on hiring plans.

 - 03 **Domain moats where it matters:** a practicing psychotherapist on the cap table for Sneh; US distribution led from inside the market.

 - 04 **Portfolio compounding:** shared engine, shared playbooks, shared learnings — every product makes the next one cheaper.

Product. Clinic. Market.

Kaustubh Tripathi

FOUNDER · PRODUCT &
ENGINEERING

Builds the entire portfolio end to end with an AI-native process. Growth & category leadership background in consumer commerce.

Snehal Saraf

CO-FOUNDER · CLINICAL LEAD,
SNEH

Practicing psychotherapist. Designs and pilots every clinical flow in Sneh TherapyOS with real clients — the product's defensibility in person form.

Shubham

CO-FOUNDER · HEAD OF US

Leads US go-to-market: agency reseller partnerships for SiteBot and distribution for the SMB suite in the largest software market.

Raising our first outside round to pour fuel on *distribution*.

-
- 01 Scale the **Sneh clinical pilot** into paying practices and employer/EAP contracts.
 - 02 Stand up the **US channel**: SiteBot agency resellers and SMB-suite distribution.
 - 03 Keep the build engine shipping — the portfolio is the pipeline.
