

INVESTOR BRIEFING • 2026

Everfold Labs

Software products that compound.

An AI-native product studio: **15 products** built end to end, **10 deployed as live betas**, a clinical co-founder, and a US go-to-market lead — run at a fraction of conventional startup cost.

01 · THE SHIFT

Building software just got *100×*
cheaper. Judgment didn't.

-
- A AI-native development collapsed build cost: what took a funded team a quarter now takes **one senior builder days**.
-
- B The scarce assets are now **taste, domain judgment and distribution** — not headcount.
-
- C The rational response: run a **portfolio**. Many complete, market-ready products beat one expensive bet.
-

One build engine. Many products. One compounding P&L.

BUILD

Ship complete

Idea → architecture → code → tests → deploy → marketing kit. Every product leaves the studio market-ready, documented and test-guarded.

VALIDATE

Prove it live

Public deployments, real pilots and waitlists before a rupee of marketing spend. Kill fast, keep what compounds.

MONETIZE

Compounding revenue lines

Subscriptions, B2B contracts and channel partnerships — every product adds a recurring line to one P&L.

The ambition: a generational, AI-native software house — a portfolio serving 100 million businesses and consumers, built from India for the world. **Everfold** — each product folds value over the last.

Fifteen products, built end to end.

Therapy OS — *a clinical moat.*

-
- 01 **The whole practice in one system:** client app (Android + PWA), therapist studio, AI companion with crisis guardrails, journaling, wellness signals.
 - 02 **Built and piloted with practicing-therapist input** — the crisis guardrails, the session model and the client journeys came out of clinical review with a real caseload, not a spec document. That review is in the product.
 - 03 **B2B built in:** employer/EAP module with anonymized wellbeing dashboards, insurance superbills, org join codes — the enterprise revenue path exists in the product today.
 - 04 **Unit economics engineered:** tiered AI quotas hold AI cost under 2% of subscription revenue. English · Hindi · Arabic.
-

SiteBot — every business site becomes a support agent.

-
- 01 **Any business website becomes a 24/7 support agent** — point it at a site, it learns every page; live demo deployed.
 - 02 **TeamBrain mode** turns internal documents into a private staff assistant — same engine, B2B price point.
 - 03 **Channel model:** productized packages sold direct and through agency partners — we supply the engine, runbooks and demo environments.
-

The SMB suite — three doors into the same customer.

FREELANCER OS

Run the business

Invoices, CRM, proposals, contracts, time — plus a bring-your-own-key AI layer. Snapline bundled with every plan.

SMB OS

Get paid locally

Invoicing that speaks each market's tax language: GST/UPI, M-Pesa, 1099/Stripe — six languages, offline-first with sync.

CHATCOMMERCE OS

Sell where chat happens

WhatsApp-native storefronts with UPI checkout and cart recovery for D2C brands, Hindi + English.

Independent professionals and small businesses — India, Africa, USA — one studio playbook, cross-sold.

Personae — *brand-owned AI creators, as a service.*

-
- 01 **Brands don't want to rent an influencer — they want to own one.** We design a creator in the brand's voice and look, produce its content, and run its campaigns end to end.
-
- 02 **Live proof: Naina Rao**, India's openly-AI creator — full content engine (posts, reels, YouTube) and a public brand site — is the flagship demonstration.
-
- 03 **The Format Engine:** a library of benchmarked content formats (styling tips, GRWM, myth-busting, dupes) produced on demand — the creator always posts in the format the algorithm currently rewards, and rotates when trends move. No reshoots, no downtime.
-
- 04 **Recurring by design:** land with a one-off creator sprint, expand into a monthly managed-creator retainer — high-margin services on a reusable creator pipeline.
-
- 05 **Compliant by construction:** every creator is openly AI (Meta · ASCI · FTC · NY synthetic-performer law) — nothing to "expose."
-

Everything here *actually runs*.

300+

AUTOMATED
TESTS GREEN

-
- + Every product ships with its own **marketing kit**: landing site, demo film, sales deck, launch plan.
-
- + Codebases are **documented and test-guarded** — every new product inherits the engine, not tech debt.
-

Four revenue streams, one cost base.

RECURRING

Subscriptions

SaaS tiers across Therapy OS, FreelancerOS, SMB OS, ChatCommerce OS.

B2B

Enterprise contracts

Employer/EAP wellbeing programs on Therapy OS; TeamBrain deployments for orgs.

SERVICES

Productized deploys

Fixed-price pilots and deployments that convert to recurring plans.

COMMERCE

Marketplace & affiliate

Transaction and affiliate revenue inside ShelfScore, GlowScan and NextPlay Pro.

The studio's cost base is nearly flat as products are added — that's the fold.

Velocity is the moat.

-
- 01 **Days, not quarters:** a proven AI-native pipeline takes an idea to a deployed, tested, marketed product in days.
 - 02 **Full-stack ownership:** web, Android, AI backends, payments, i18n — no dependency on hiring plans.
 - 03 **Domain moats where it matters:** Therapy OS was built and piloted against a practicing therapist's real caseload; US distribution led from inside the market.
 - 04 **Portfolio compounding:** shared engine, shared playbooks, shared learnings — every product makes the next one cheaper.
-

Product. Market.

Kaustubh Tripathi

FOUNDER & CMO

Builds the entire portfolio end to end with an AI-native process, and leads brand, growth and go-to-market. Marketing & category leadership background in consumer commerce.

Shubham

CO-FOUNDER · HEAD OF US

Leads US go-to-market: agency reseller partnerships for SiteBot and distribution for the SMB suite in the largest software market.

Raising our first outside round to pour fuel on *distribution*.

-
- 01 Take **Therapy OS** to paying practices and employer/EAP contracts.
 - 02 Stand up the **US channel**: SiteBot agency resellers and SMB-suite distribution.
 - 03 Keep the build engine shipping — the portfolio is the pipeline.
